Upload Info

Add the files and folders you want to upload to S3. To upload a file larger than 160GB, use the AWS CLI, AWS SDK or Amazon S3 REST API. Learn more 🗗

> Drag and drop files and folders you want to upload here, or choose **Add files** or **Add folder**.

[Actions ▼] [Create folder] [⬆ Upload]

Objects are the fundamental entities stored in Amazon S3. You can use Amazon S3 inventory 🗗 to get a list of all objects in your bucket. For others to access your objects, you'll need to explicitly grant them permissions. Learn more 🗗

Block Public Access settings for this bucket

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to this bucket and its objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to this bucket or objects within, you can customize the individual settings below to suit your specific storage use cases. Learn more ↗

☐ **Block *all* public access**
  Turning this setting on is the same as turning on all four settings below. Each of the following settings are independent of one another.

  ☐ **Block public access to buckets and objects granted through *new* access control lists (ACLs)**
     S3 will block public access permissions applied to newly added buckets or objects, and prevent the creation of new public access ACLs for existing buckets and objects. This setting doesn't change any existing permissions that allow public access to S3 resources using ACLs.

  ☐ **Block public access to buckets and objects granted through *any* access control lists (ACLs)**
     S3 will ignore all ACLs that grant public access to buckets and objects.

  ☐ **Block public access to buckets and objects granted through *new* public bucket or access point policies**
     S3 will block new bucket and access point policies that grant public access to buckets and objects. This setting doesn't change any existing policies that allow public access to S3 resources.

  ☐ **Block public and cross-account access to buckets and objects through *any* public bucket or access point policies**
     S3 will ignore public and cross-account access for buckets or access points with policies that grant public access to buckets and objects.

Bucket policy

Policy examples ↗   Policy generator

The bucket policy, written in JSON, provides access to the objects stored in the bucket. Bucket policies don't apply to objects own other accounts. Learn more ↗
